

Model 2M2

Gabro guillotine notchers for cutting without distortion and to unlimited length.

Conventional shears have a scissor action which invariably results in at least one piece of the material being distorted. The Gabro design eliminates this by progressively blanking out a thin strip of material which leaves both sections entirely undistorted and free from sharp burrs and edges.

Sheets of unlimited size can be cut and notched without difficulty up to the maximum material thickness for each machine. Stainless steel and non ferrous metals can also be cut without difficulty, as well as perforated and expanded metal, hardboard, laminates and plastics.

A Side fence, Angle guide, backstop and a nibbling steady are supplied with the machine. Gabro notchers are made for workbench mounting. Model 2M2 can be supplied with at tubular floor stand and model 3M2 can be equipped with an optional wheeled stand.

Maximum Capacity	Mild steel	1,6 mm
	Stainless Steel	1,4 mm
	Non-ferrous metals	3,2 mm
Minimum capacity		0,25 mm
Usual blade/die clearance		0,1 mm
Thickness of the blade		3,3 mm
Maximum length of cut at one stroke		70 mm

plaatbewerkingsmachines

Table size	480 x 370 mm
Floor space stand mounted	460 x 810 mm
Table height stand mounted	810 mm
Height of the machine handle up	1619 mm
Height of the machine	1012 mm
Weight of the machine	12 kg
Weight of the machine with tubular stand	21 kg
